

Requirements for Airline Flight Database

- This will provide the information to the airline company people about the flight information, passenger's information, plane information and worker's information.
- The airline employee has to login with username and password.
- Each flight will be identified with the flight id and it will have all the information about the passengers, flight crew, plane etc.
Based upon the flight id entered, all the information related with the flight like flight departure and arrival airport and time, plane assigned to flight, flight crew and flight passengers information will be displayed. The person can search the flights by id or he can gather the information about the flights taking off from a particular airport or landing at a particular airport.
- Each passenger will be uniquely identified with the passport number. The person can be searched by name, id and all the information about the passenger like name, flight details can be seen.
- Each plane will have a unique plane registration number. Based upon the plane registration no, the information about the plane will be displayed.
- Each worker will be having an id which will uniquely identify him. You can search the information about the worker by using profession, name or worker id.
